Leakage Data Logging / Pressure Management Technician

About Aqualogic

Aqualogic are the UK leaders in providing leak detection and water network field services. We provide services to many of the major water utility companies and their customers, as well as an impressive cross sector customer portfolio. Our unrivaled experience in water conservation and our philosophy of Integrated Demand Management makes us the standout company within the water industry.

Our product and service portfolio allied with continual innovation is fundamental to our success; delivering our services for nearly four decades within the water sector our holistic approach is well placed for the future of water demand management.

Our services cross over all aspects of water use and are designed to offer complimentary and beneficial services to our clients. With a keen eye towards technological advancement our field services are at the cutting edge of network resilience and operability.

Overview

Aqualogic have many opportunities available for candidates to join our thriving field services team delivering key water demand related services to our Utility Customers, as well as a range of private and public-sector customers in England, Scotland and Wales, presently with focused demand in our Southern regions. The candidate must possess a clean driving licence and be willing to work across region.

The successful candidates will be required to undertake field activities such as data logging services, PRV servicing and deploying flow & pressure devices on a range of water distribution networks. You will be involved in data analytics, pressure management & strategic flow verification activities.

Subject to experience, you will form part of our buddy scheme and will receive role specific training during your time with us. Experience and knowledge of water distribution networks is essential for this role.

As a Water Demand Technician you'll be involved with:

- Flow & pressure data logging – set up, installation and analysis.
- PRV Controller installation and maintenance.
- Installing portable flow meters and analysing the data.
- Supporting the team on a variety of different projects and initiatives.
- Undertaking water network audits and surveys.
- Always acting as an ambassador for Aqualogic.

Skills and Experience Highly Beneficial for this Role are:

- A minimum of two years appropriate water industry experience.
- Ability to work to tight deadlines and budget in a busy environment.
- Experience across a range of disciplines including data logging, pressure
